The 26th edition of the International Fair Petrol Station 2019

The fuel market is changing rapidly - it is becoming increasingly modern, innovative and competitive. In order to measure up to constantly growing requirements of clients, entrepreneurs must follow the latest trends, techniques and solutions for business. The International Fair Petrol Station is an excellent opportunity to check the industry offers, meetings with contractors and potential clients.

From 15th to 17th of May 2019, will take place the 26th edition of the International Fair Petrol Station, it have been for a long time an important event for economic transformation. New and developing private enterprises needed technology and knowledge about running a business in free market conditions. *In the first mid-90s of the 20th century private and public stations underwent a profound metamorphosis to face competition down. This concerned a better offer and quality of service* - said **Halina Pupacz**, President of the Polish Chamber of Liquid Fuels. The International Fair Petrol Station is meeting the requirements of the market, in one place among exhibitors from around the world.

Outside of the fuel infrastructure, an additional offer is constantly being developed - compared to a convenience store and gastronomy. Investors are very interested in car washes - imported from the West, and then more often produced in Poland. Currently, the full range of this type of devices can be read in the specially prepared zone of the Fair - "Car Wash Area".

After Poland's entry into the European structures, the stations had to adapt to very strict EU requirements. This caused many pro-ecological changes - at stations, in transport and additional services. Market development is the result of electro- and gas-mobility - thus suppliers of electric car chargers (EV) and cisterns for transporting methane fuels (LNG / CNG) appear at the fair.

As a result of respect the safety rules today, Polish stations are the most modern in Europe as well as in the world. You can check it out if you visit the 26th edition of the International Fair Petrol Station, Expo XXI Warsaw. *Organized by the Polish Chamber of Liquid Fuels, the International Fair Petrol Station is an opportunity to improve your own knowledge, solving current problems of the fuel and energy industry, also learning modern products and services* - said Halina Pupacz. An important part of the program is the Discussion Forum devoted to the current situation on the fuel market. Representatives of government administration and market experts will appear during this Forum, as well as influential people for the structure and development of the industry. Petrol Station is also a networking zone, specialized training and additional attractions.
